Restoration

Cleaning is the first procedure. Only biodegradable products are used to restore the original beauty and color of your building's exterior surface. There is no damage to painted trim or shrubbery. Your building will be treated with respect as if it were our own!

Benefits

The primary purpose of the Restorative Cleaning process is to safely remove any existing contaminants, such as DIRT, MILDEQ, ALGAE and OXIDATION etc, allowing the true condition of the surface to be inspected, and if necessary repaired. It also prepared the exterior surface for a Protective Sealer that will prevent water from entering Masonry or Wood and alge or contain any further deterioration to the existing surface.

Protect/Preserve

The final step is to protect the restored surface from further water absorption and other moisture related damage by applying a clear non-staining, waterproofing sealer.

1. This provides an invisible barrier that prevents any premature surface discoloration to the existing surface.
2. Keeps the surface cleaner by helping to repel dirt and pollution accumulation and retards the growth of FUNGUS, MOSS, MILDEWQ, and ALGAE, (especially prevalent on Cedar Shake and Wood siding).
3. Reduces the cost of long term repairs and maintenance expenses for all Exterior Surfaces.

About Our Cost

The cost of the cleaning and protecting service is based on the size of your building, type of surface, and degree of dirt or paint. A FREE estimate will be provided.

We believe you'll be amazed how inexpensively your building can be Restored & Preserved.

- **FULLY INSURED**
